

ABSTRACT

ELECTRONIC DEVICE FOR GENERATING AND
DISPLAYING AN ITEM OF INFORMATION

The present invention concerns an electronic device for generating and displaying an item of information, including a flexible body (2) shaped to be able, for example, to be secured to a user's wrist, an electronic unit (18) for generating the information, at least a display cell (20) for displaying said information, and an electric
5 power source (22) for powering the electronic unit (18), wherein the flexible body (2) has, at at least one location on its length, an overthickness of material forming a rigid receptacle (28) in the inner cavity of which is arranged said electronic unit (18).
